### COURSE OVERVIEW

This course examines the demographic changes that shape the economic, social, political, cultural, and physical nature of cities, and the role of planning and policymaking in guiding, managing, and responding to demographic change. The course explores the factors involved in the regulation and dynamics of population change at a variety of spatial scales. Key debates and best practices from the Canadian context and around the globe are considered to determine how planning can help or hinder communities undergoing demographic transitions.

### LEARNING OUTCOMES

On successful completion of the course students will be able to:

- Critically review academic literature and planning policies related to demographic change
- Analyze demographic trends at multiple spatial scales
- Present and analyze complex concepts in written and verbal formats

### COURSE TOPICS

Planning for population change will be examined through a range of issues and topics including: extreme growth and decline, aging and age-friendly cities, youthification and child-friendly cities, migration, immigration, refugee dynamics, and gateway cities. Through these topics we will consider the economics, geography, socioeconomics, and ethics of planning for population change.
